Dmytro Bilukha

Senior Frontend Engineer / Team Lead

Vinnytsia, Ukraine · Remote · Open to relocation

Email: siniidrozd@gmail.com

Website: bilukha.dev · LinkedIn: linkedin.com/in/dmytro-bilukha · GitHub: github.com/MIt9

SUMMARY

> Senior Frontend Engineer and Team Lead with 11+ years of full-time development and 14 years of JavaScript (React, TypeScript, Angular, Node.js). Spent 10 years at TEMABIT (Fozzy Group) on silpo.ua and Shop Silpo, the e-commerce platform of Ukraine's largest grocery retailer (900K+ monthly organic visits, record 61M UAH monthly GMV). Launched Shop Silpo in React + TypeScript in ~3 weeks and architected the merger of the two sites (+12% traffic, +4% conversion). Led 3 teams of 6, then a 9-person cross-functional team. Open to work since July 2026, remote or relocation.

EXPERIENCE

Team Lead

TEMABIT Software Development (Fozzy Group) · Vinnytsia, Ukraine · *Mar 2016 – Jul 2026*

Scope: silpo.ua, the Shop Silpo online store and internal retail tools for Fozzy Group. Promoted Middle Full-Stack Developer (2016) → Senior Full-Stack Developer (2018) → Tech Lead (2019) → Team Lead (2022).

- **Personally built or led development of 7 product areas from scratch:** content pages, recipes module, banners/promo-blocks service, page builder, vacancies section, events & ticketing, gift certificates
- **Led 3 teams of 6 people each (2020–2022, as Tech Lead):** Content, Shop and Resto teams, through the Shop Silpo scale-up; grew from developer to tech lead in 3 years
- **Served as Scrum Master** (retrospectives, sprint planning, continuous improvement); mentored 5+ developers to senior level, ran 1-on-1s and technical interviews
- **Delivery tooling:** designed Azure DevOps pipelines (including silpo.ua content pages), added steps to existing GitLab CI/CD pipelines, wrote Dockerfiles, set up Sentry monitoring

Team Lead (2022 – 2026)

Scope: silpo.ua Marketing Features team, cross-functional team of 9 in 2022–2026 (2 frontend, 2 backend, 3 QA, 1 business analyst, 1 designer) owning content, recipes, promo and page-builder areas; architecture plus hands-on React and Angular development.

- **Led the merger of silpo.ua and Shop Silpo (~2023–2024)** into one domain, contributing to +12% traffic and +4% conversion rate: React content pages and the Angular catalog/store stayed separate behind Nginx + Node.js/Express; designed the routing rules and the "404 service" that decides which routes React or Angular serves
- **Built a shared header for React and Angular** as a Lit Web Component and designed the cross-framework approach
- **Add to cart without leaving content pages (~2023):** designed the front-end solution, components and data/state flow; homepage product widgets, before the merger, gave **~+15% conversion** (internal estimate)
- **Recipes section in silpo.ua (2025):** front-end architecture and development in an Angular monorepo; the MVP gave **~+5% overall sales** (internal estimate); after expansion into the full Recipes section: **x32 page views**, +200% purchases from recipes (Web), +31% conversion rate to orders
- **Page Builder (late 2025):** personally designed and built it; JSON Schema describes each block's fields, and a React/TypeScript form generator renders block settings (inputs, toggles, asset pickers) with validation, so content managers create reusable block types with no per-block backend work and no raw JSON
- **City promo pages (/offers/city/{city}):** shipped as a quick SEO solution with one route per city, letting users open a city's promotions directly; +10% organic traffic within 3 months, still live
- **Shuba partner integration (2024):** designed and built "Buy ingredients" from recipe pages on the partner site shuba.life: a dynamic link carries the ingredient list in the URL to silpo.ua/shopping-list, which shows a product carousel per ingredient; ~10% of visitors coming from Shuba make a purchase
- **Architected the banners microservice:** extracted from the monolith; a new product (LOKO app) launched 50+ banners with zero additional development
- **Multi-agent development process:** designed and rolled out a Kiro CLI multi-agent workflow inside the company; **~50% time saved** (internal estimate)
- **Owned the React direction across Silpo teams (2024 – Jul 2026); chaired the React Forum (early 2025 – Jul 2026):** led cross-team code review and established coding standards for the company's React stack
- **Performance and accessibility:** Core Web Vitals (LCP/FCP) improved by 40%, JavaScript bundle cut by 17% via code splitting; accessibility audit score raised from 60 to 95/100, then screen-reader bugs (ARIA labels, focus and announcements in header, cart, search) fixed with a screen-reader user over 3 months
- **Revenue impact:** promotional carousels generated 65M UAH revenue/quarter (+26% quarter over quarter); contributed to record 61M UAH monthly GMV (December 2025); supported 310M UAH total promotional revenue during Black Friday (243K transactions)
- **Landing pages:** 6+ high-traffic pages (150K–1M views each) with 5% e-commerce conversion; Black Friday 1M+ views, 62% new customer acquisition; LEGO brand page (built on Page Builder) 54% visit-to-action, 82% product engagement; QR-code complaints flow for stores (React, from scratch); vacancies redesign (~2023)
- **Owned the Architecture Decision Record (ADR) process** (e.g. Vacancies 2.0 hybrid strategy)

Tech Lead (2019 – 2022)

- **Launched Shop Silpo (2019) from scratch in React + TypeScript in ~3 weeks:** built the core architecture of its two single-page applications (SPAs) with catalog, cart, checkout and registration flows, chose the technical solutions and coded; the platform grew from ~10

stores at launch to ~50 after six months, ~150 after about two years and ~300 a year later

- **"Zero catalog" (~2020–2021):** led, designed and helped build catalog browsing without first choosing a delivery address
- **Handed Shop Silpo to another team (~2021)** for a gradual React → Angular rewrite (about a year) and kept supporting the React part in parallel
- **Standalone Recipes site (2021 – early 2022):** architect and Tech Lead for a team of 6 (2 backend, 2 frontend, 2 QA): technical decisions, task split, code review, part of the Next.js front end; built two Node.js services (internal and external network) exchanging prices, stock and recipes over RabbitMQ; PostgreSQL as the database; ingredients went straight into the Shop Silpo cart through its API. Nearly finished but never launched: closed after the full-scale invasion in 2022
- **Store pickup orders:** designed the process, the front end and the front-end/back-end data structures on top of the existing React architecture
- Took part in launching the Fora retail site on Next.js (~2020)

Senior Full-Stack Developer (2018 – 2019)

- Joined the existing silpo.ua React product (Redux, GraphQL): UI improvements, new features, promo pages, front-end architecture
- **Page Constructor:** helped design a block-based page system (GraphQL page model); ~8–10 promo pages a year at **~80% lower cost per page** (internal estimate)
- **Event e-tickets and gift e-certificates:** full front-end purchase path, shared cart, payment page template hosted by UPC (Ukrainian Processing Center)
- **Vacancies section ("Robota Silpo"):** React + GraphQL, admin and templates; data design, UI/UX, front end

Middle Full-Stack Developer (2016 – 2018)

- Contributed to the first iteration of an Electron-based self-service app for Bizerba scales on an existing Linux system (product images, semantic product search, label printing), used in Silpo and Fora stores; my part: research, interface design, database optimization, front end and part of the Node.js services (React, Electron, Node.js, PostgreSQL)
- PromoTools internal CRM interfaces (Kendo UI); Angular 2+ front end for an outstaff project under NDA

Middle Full-Stack Developer

AppsStudio · Ukraine · *Mar 2015 – Mar 2016*

- **Sole developer on four cross-platform mobile apps** (Sencha Touch + PhoneGap), all published to Google Play and the App Store: built YOUNell (nutrition-tracking app) from scratch, maintained and extended ibibook (services marketplace startup), maintained Pizza House and Roll.lg (food-delivery ordering)
- Worked directly with the project manager who set the tasks; wrote a local Node.js server for development

Frontend Developer (Freelance)

2012 – 2015 · part-time

- JavaScript development; themes and templates for Joomla, WordPress and Drupal

HTML Markup Developer (Freelance)

2009 – 2012 · part-time

- HTML/CSS markup

PROJECTS

silpo.ua — Unified E-commerce Platform

Ukraine's largest supermarket chain (Fozzy Group, 300+ stores)

Scale: 900K+ monthly organic clicks · 49.5M search impressions/quarter · 1.66M active weekly users · 61M UAH record GMV/month

Role: Middle Full-Stack Developer → Senior Full-Stack → Tech Lead → Team Lead (2016–2026)

Stack: React · Redux · TypeScript · GraphQL · Node.js · Next.js · Angular · CSS Modules · Webpack

- Unified platform: online store + content + recipes + page builder + back-office; 100+ microservices, 20+ Silpo teams (services and front ends), ~40 across the ecosystem
- Custom routing architecture with React/Angular coexistence and 404-service gateway; CI/CD pipelines in GitLab, monitoring via Sentry

shop.silpo.ua — E-commerce Platform (Completed)

Standalone online grocery store, launched 2019, merged into silpo.ua in 2024

Role: Tech Lead — launched from scratch (2019, two React + TypeScript SPAs); led 3 teams of 6 (Content, Shop, Resto) 2020–2022

Stack: React · Redux · TypeScript · GraphQL · CSS Modules

- Built the entire e-commerce frontend from zero: catalog, cart, checkout, promotions; "zero catalog" without address selection (~2020–2021)
- Scaled to serve one of Ukraine's largest grocery delivery operations; merged into silpo.ua (+12% traffic, +4% conversion rate)

SKILLS

Frontend: JavaScript, TypeScript, React, Redux, Next.js, Angular, Lit (Web Components), HTML5, CSS3, CSS Modules, Stylus, Kendo UI, Electron (2016–2017), Sencha Touch and PhoneGap (2015–2016)

Backend & integration: Node.js, Express, GraphQL, REST API, RabbitMQ, PostgreSQL, JSON Schema, JWT/OAuth/cookie auth (integrating existing solutions), Python (personal projects, PyPI packages)

Testing: Jest, Jasmine, Playwright, Cypress

AI/LLM: Kiro CLI (multi-agent workflow), AI-assisted development (Claude Code, Codex, Antigravity, OpenCode, Gemini), custom MCP (Model Context Protocol) servers, agentic workflows

DevOps & monitoring: Docker (Dockerfiles), Nginx, Azure DevOps pipelines, GitLab CI/CD, TeamCity, Sentry (set up), Grafana (used), AWS (user level: RDS, S3, CloudWatch), Git, Webpack, npm

Personal projects: NestJS, Prisma, Redis, MongoDB, DynamoDB, Elasticsearch, Cloudflare, WebSockets

Practices: Code Review, ADR, Agile (Scrum, Kanban, Waterfall by project stage), OKR, A/B Testing, Mentoring, Performance (Core Web Vitals), Accessibility (WCAG, screen-reader UX)

Open Source: mcp-comfy-ui-builder (MCP server for ComfyUI, npm) · laya-cli (typed-decisions CLI, Python, PyPI) · kie-media-cli (generative media CLI, npm) · job-form-filler (Chrome extension + MCP server, npm) · perplexity-pro-mcp (MCP server, npm)

EDUCATION

Master's degree — Vinnytsia State Pedagogical University · 2002–2007

Java, Android and iOS (Objective-C) courses, Level 1 — GeekBrains (certificates issued as Shkola Programmirovaniya) · 2013–2014

JavaScript course — RIA.com internal IT courses · May–Dec 2012

CERTIFICATIONS

- Claude Code in Action — Anthropic (2026)
- Claude 101 — Anthropic (2026)

LANGUAGES

Ukrainian — Native · English — Upper-Intermediate (B2) · Russian — Native

INTERESTS

- **Wrestling** — Master of Sports in Greco-Roman wrestling, 5x regional champion, bronze medalist at Ukrainian Universiade. Former wrestling coach before transitioning to IT.
- **Family** — Married, 3 children. Pet lover (dog, cat, fish).
